Nationality: French

I am an IT engineer student at EPITECH school from Paris, interested in spending 1 year in Sydney.

I have a good interpersonnal capacity and like to work well with others. I am very curious to learn new informations and create new ideas. I always stay motivated.

The most important things in computer programming for me is to keep a clean code, do the unit test before delivering, comment it and don't hesitate to write the complete documentation about the project that I develop. I like to maintain a clean and optimized code in any project for the others next developers.

I am looking for a PHP developer part-time job, I am also available for full-time from November. My student VISA allow me to work for 20h/w. I stay at your disposal if you need further information about me.

EDUCATION

Australian Catholic University (ACU) Mackillop campus
